DETAILED ACTION

Priority

1. Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claim 1 is rejected under 35 U.S.C. 102(b) as being anticipated by Takamiya et al. ('239).

Takamiya et al. ('239) discloses a transparent member (Fig. 7, Ref. 10a & 10b) having a refraction index being different from a refraction index of an air (Col. 6, lines 45-54); and a holder for supporting the transparent member in such a way that the transparent member (Fig. 7, Ref. 10a, 10b) is placed in an optical path of the laser beam (Fig. 7, Ref. 5a, 5b); wherein the transparent member changes a reference distance of the laser displacement sensor by changing the optical path of the laser beam (See Fig. 7). It is the position of the examiner that the optical elements 10a and 10b of Takamiya et al. ('239) are being held by a holder in figure 7 since optical elements cannot be suspended in air and figure 7 is an illustration of the placement of the optical elements, therefore it would be inherent to use a holding means. Further it is the position

Art Unit: 2877

of the examiner that the transparent members 10a & 10b change the optical path of the light beam therefore it is inherent that the reference distance changes also.

FIG. 7

Allowable Subject Matter

4. Claims 2-6 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
